

Achievement in Transformational Finance

Aihuishou Electronics Recycling Platform, China

Aihuishou is China's largest platform for electronics recycling and disposal. It provides transparent valuation, data deletion, and environmentally-friendly disposal via online, in-store and door-to-door channels. Aihuishou's aim is to reform a marketplace currently dominated by scalpers, opaque pricing, privacy violations, and environmental disregard.

Alipay Financial Access Platform, China

Alipay provides mobile payment services to 800 million users in and outside of China. This enables unbanked and underbanked citizens to gain access to the global marketplace online and across millions of brick-and-mortar merchants. Alipay's wider initiatives have also increased transparency in carbon footprint tracking and charitable giving.

Climate Fund Managers Investor One Funds, Netherlands

Climate Investor One seeks to transform the funding of green infrastructure projects in developing countries, by providing whole-of-life financing and strategically-positioned donor capital. In combination with technical, legal, financial and environmental consultancy from Climate Fund Managers, this reduces project timelines and liquidity risks.

GuiaBolso Digital Personal Finance Hub, Brazil

GuiaBolso is Brazil's only free, fully-automated personal financial management system. By aggregating users' financial and credit bureau data into a single interface, GuiaBolso helps its customers to understand their finances, track their spending, and access tailored financial products and loans at the best available rates.

LuxEX Luxembourg Green Exchange

The Luxembourg Green Exchange is the world's only stock exchange platform dedicated exclusively to green, social and sustainable projects and investments. By providing free access to transparent and strictly regulated financial reporting, the Luxembourg Green Exchange helps increase awareness, credibility and accessibility for green securities.

MicroEnsure Global Products Platform, UK

MicroEnsure delivers insurance for low income communities in emerging markets. The company's use of technologies and distribution partners, tailored to the needs of local demographics, enhances ease of access and turnaround times on claims. The reduction of value chain costs through digitisation further enables affordable, sustainable and scalable provision.

OASIS Loss Modelling Framework, UK

Oasis Loss Modelling Framework is an open-source platform that provides access to disaster risk data and models previously restricted to insurance specialists. These tools can assist governments and industry from developing economies to plan for extreme events and climate change. They can also help reduce the cost of disaster insurance for lower-income individuals worldwide.
