

## **Bringing Cloud Security Down to Earth**

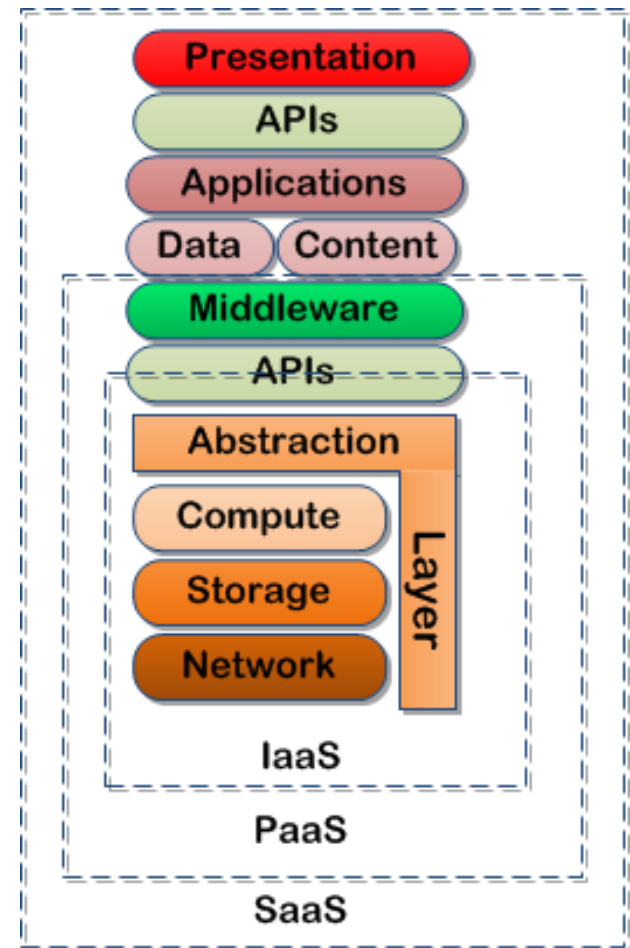

**Ted Ritter, CISSP**  
**Senior Research Analyst**  
**[www.nemertes.com](http://www.nemertes.com)**

- **About Nemertes**
- **Cloud Dynamics and Adoption**
- **Assessing Risk of Cloud Services**
- **Addressing Cloud Security**
- **Emerging Approaches to Cloud Security**
- **Virtualization Security Contact Points**
- **Summary and Conclusions**

- ◆ Quantifies the business impact of emerging technologies
- ◆ Conducts in-depth interviews with IT professionals
- ◆ Advises businesses on critical issues such as:
  - ◆ Unified Communications
  - ◆ Social Computing
  - ◆ Data Centers & Cloud Computing
  - ◆ Security
  - ◆ Next-generation WANs
- ◆ Cost models, RFPs, Architectures,

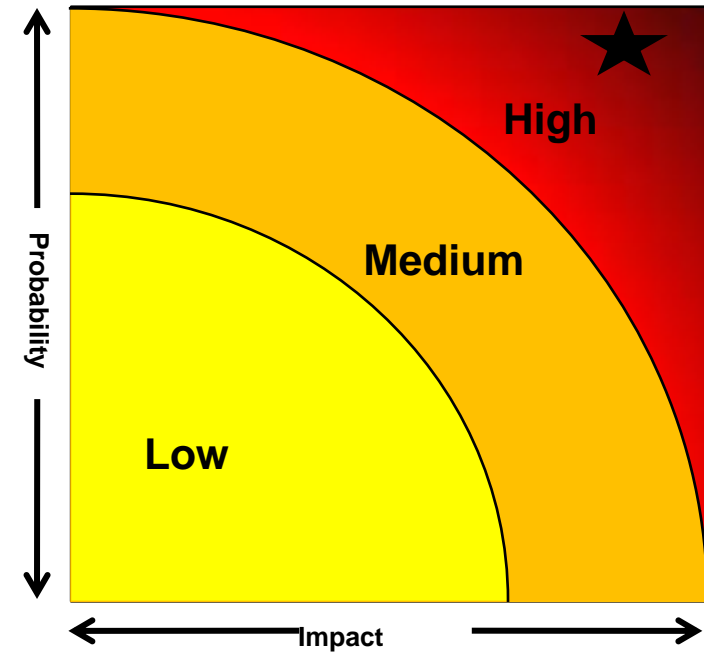

- IaaS & PaaS adoption < 9%
- SaaS adoption = 52%
- Limitation of IaaS and PaaS adoption is concern over security and compliance
- Virtualization provides agility, flexibility and scalability
- Virtualization Security (VirtSec) is a fundamental aspect of cloud security for all cloud models

\*Based on Cloud Security Alliance CSA Guide service model ([www.cloudsecurityalliance.org](http://www.cloudsecurityalliance.org))

# Assessing Risk of Cloud Services

1. Loss of governance
2. Service provider lock-in
3. Compliance risks
4. e-Discovery and litigation support
5. Management interface compromise
6. Network management failure
7. Isolation failure
8. Data protection
9. Insecure/Incomplete data deletion
10. Malicious insider

# Addressing Cloud Security

## Cloud Control Matrix

- **Governance Risk and Compliance (GRC) Stack**
  - **Toolkit consisting of three components:**
    - **Cloud Audit**
      - **Automated Audit, Assertion, Assessment and Assurance API (A6) via an open, secure, extensible interface and methodology**
    - **Cloud Controls Matrix (CCM)**
      - **Controls framework addressing the security concepts and principles aligned to the CSA guidance 13 domains**
      - **Pulls from other standards – HITRUST CSR, ISO 27001/27002, ISACA COBIT, PCI, HIPAA and NIST 800-53**
    - **Consensus Assessments Initiative Questionnaire (CAIQ)**
      - **Questions a cloud consumer or cloud auditor should ask a cloud provider**

# CSA Governance Domains

<b>Domain</b>	<b>Areas of Focus</b>
<b>Governance and Enterprise Risk Management</b>	<ul style="list-style-type: none"><li>• Legal precedence for agreement breaches between provider and customer</li><li>• Ability to adequately assess risk of a cloud provider</li><li>• Joint responsibility for data</li><li>• Managing international boundaries</li></ul>
<b>Legal and Electronic Discovery</b>	<ul style="list-style-type: none"><li>• Establishing and enforcing retention policies regardless of data location</li><li>• Complying with breach disclosure laws</li><li>• Privacy and regulatory requirements</li><li>• Complying with international laws</li></ul>
<b>Compliance and Audit</b>	<ul style="list-style-type: none"><li>• Compliance with internal, regulatory, industry-specific and legislative rules</li><li>• Audit roles and responsibilities in support of compliance</li></ul>
<b>Information Lifecycle Management</b>	<ul style="list-style-type: none"><li>• Responsibilities for data integrity, confidentiality and availability</li><li>• General data control and identification in the cloud and between cloud and customer</li></ul>
<b>Portability and Interoperability</b>	<ul style="list-style-type: none"><li>• Moving data from one provider to another</li><li>• Bringing data (and other assets) in-house</li><li>• Interoperability between providers</li></ul>

Domain	Areas of Focus
<b>Traditional Security, Business Continuity and Disaster Recovery</b>	<ul style="list-style-type: none"> <li>• High-level security discussion relating enterprise risk management to cloud</li> <li>• The role of cloud in BC-DR</li> <li>• Ways in which the cloud may improve security</li> </ul>
<b>Data Center Operations</b>	<ul style="list-style-type: none"> <li>• Provider data center operations and continuity of operations</li> <li>• SAS 70, ISO 27001, NIST, etc.</li> </ul>
<b>Incident Response, Notification and Remediation</b>	<ul style="list-style-type: none"> <li>• Incident detection, response, notification and remediation</li> <li>• Complexity of incidents in the cloud</li> <li>• Coordination between cloud provider and customer</li> </ul>
<b>Application Security</b>	<ul style="list-style-type: none"> <li>• Assessing the role of IaaS, PaaS and SaaS for application security</li> <li>• Coding and implementation best practice</li> </ul>
<b>Encryption and Key Management</b>	<ul style="list-style-type: none"> <li>• The “why” behind the need for encryption in the cloud</li> <li>• Both protecting data and access to cloud resources</li> </ul>
<b>Identity and Access Management</b>	<ul style="list-style-type: none"> <li>• Leveraging directory services to provide access controls</li> <li>• Assessing readiness for cloud-based IAM</li> </ul>
<b>Virtualization</b>	<ul style="list-style-type: none"> <li>• Issues of multi-tenancy at the server virtualization level</li> <li>• VM isolation, co-residence and hypervisor vulnerabilities</li> </ul>

# Controls to Address Risk

<b>Model</b>	<b>Preventive Controls</b>	<b>Detective Controls</b>
<b>SaaS</b>	<ul style="list-style-type: none"><li>• Identity Management including multi-factor authentication</li><li>• Browser patching and hardening</li><li>• Endpoint security</li></ul>	<ul style="list-style-type: none"><li>• Access reports</li></ul>
<b>PaaS</b>	<ul style="list-style-type: none"><li>• User authentication (multi-factor)</li><li>• User privilege management</li><li>• Browser patching and hardening</li><li>• Endpoint security</li></ul>	<ul style="list-style-type: none"><li>• Access reports</li><li>• Vulnerability scanning (application and user access)</li></ul>
<b>IaaS</b>	<ul style="list-style-type: none"><li>• VPN for management access and movement of VMs</li><li>• Configuration and patch management</li><li>• Access controls and multi-factor authentication</li><li>• Host IDS/IPS</li><li>• VirtSec appliance</li></ul>	<ul style="list-style-type: none"><li>• Access reports</li><li>• Event logging and correlation</li><li>• Vulnerability scanning (application and user access)</li></ul>

- **The concept of trust changes with cloud model**
  - Trust must extend into the cloud (SaaS, PaaS and IaaS)
- **Three key identity management areas**
  - User management, Authentication management, Authorization management
- **Evolving standards**
  - ⊕ SAML – Secure Assertion Markup Language → Single Sign-on (SSO)
  - ⊕ XACML – eXtensible Access Control Markup Language → least privilege
  - ⊕ OAuth – Open Authentication → share cloud data

# Identity Management Recommendations

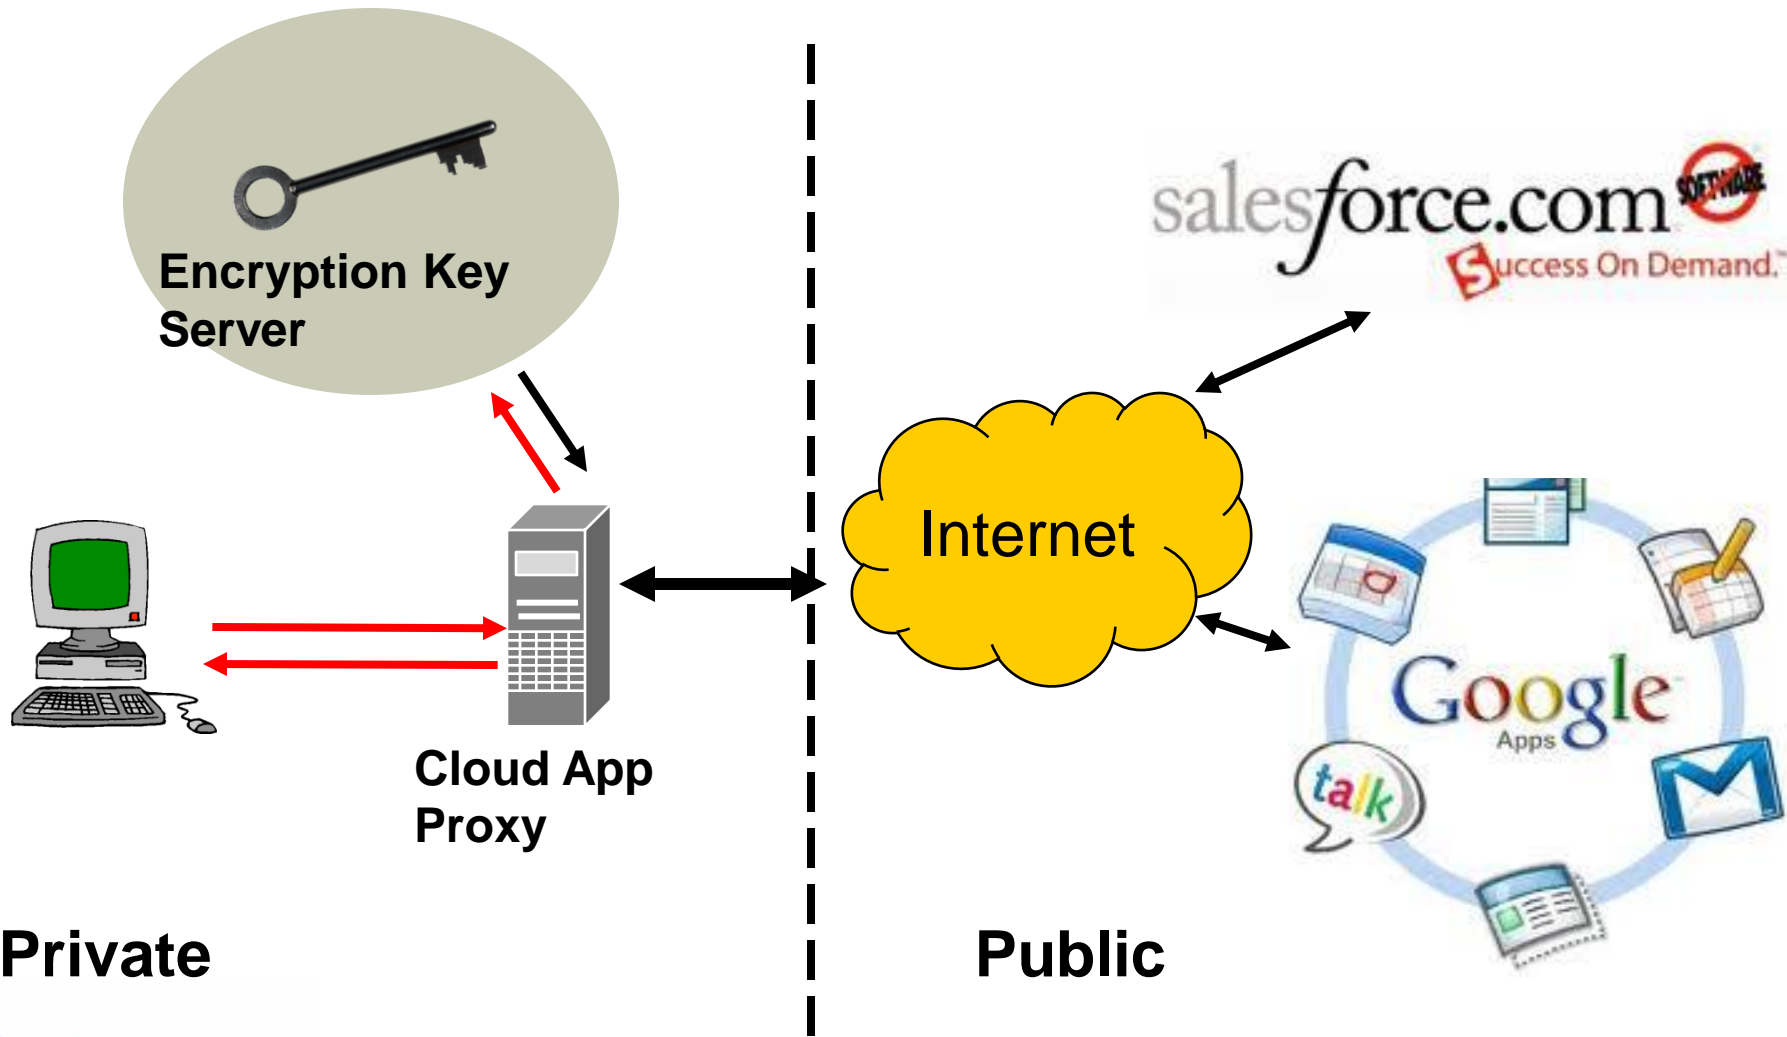

IAM Area	Challenge	Recommendation
<b>User Management</b>	<ul style="list-style-type: none"><li>• Secure and timely management of onboarding and offboarding cloud users</li><li>• Extending enterprise IAM systems into cloud</li></ul>	<ul style="list-style-type: none"><li>• Avoid building custom interfaces for user provisioning</li><li>• Push cloud provider to use open standards</li></ul>
<b>Authentication Management</b>	<ul style="list-style-type: none"><li>• Credential management</li><li>• Strong authentication</li><li>• Delegated authentication</li></ul>	<ul style="list-style-type: none"><li>• Manage credentials in own identity solution and federate with cloud provider</li><li>• When users self-provision services a decentralized standard like OpenID provides authentication to multiple services</li><li>• For IaaS establish a dedicated VPN or use standard assertion (SAML) with encryption (SSL)</li><li>• For IaaS, PaaS and SaaS push cloud provider to delegate authentication to the enterprise via SAML or WS-Federation</li><li>• Multi-factor authentication is essential</li></ul>

# Identity Management Recommendations, C

<b>IAM Area</b>	<b>Challenge</b>	<b>Recommendation</b>
<b>Authorization Management</b>	<ul style="list-style-type: none"><li>• Establishing standard authorization model for multiple cloud providers</li><li>• Passing authorization information between cloud providers</li><li>• Enforcing and monitoring enforcement of authorization</li></ul>	<ul style="list-style-type: none"><li>• Identity authoritative sources of user and policy information</li><li>• Determine privacy policies for type of data</li><li>• Establish mechanism to transfer policy information from policy administration point (PAP) to policy decision point (PDP)</li><li>• Establish mechanism to transfer policy information from policy information point (PIP) to PDP</li><li>• Establish mechanism to request policy decision from PDP</li><li>• Establish policy enforcement point (PEP) to enforce policy</li><li>• Implement logging of all authorization management actions</li></ul>

# Emerging Approaches to Cloud Security

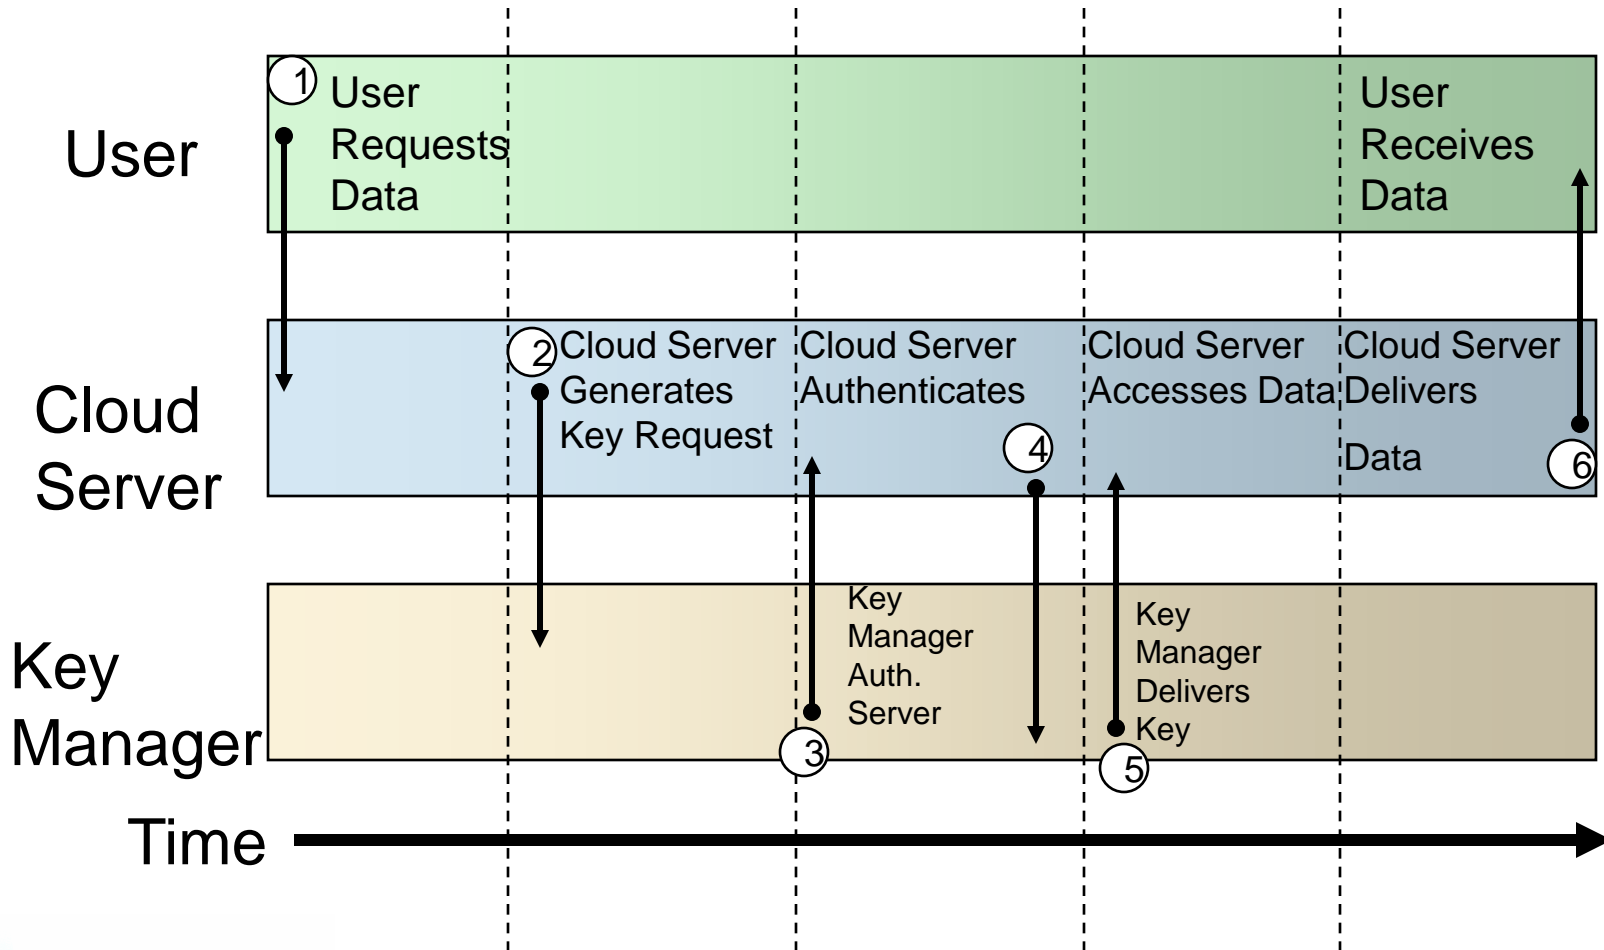

## Data Centric

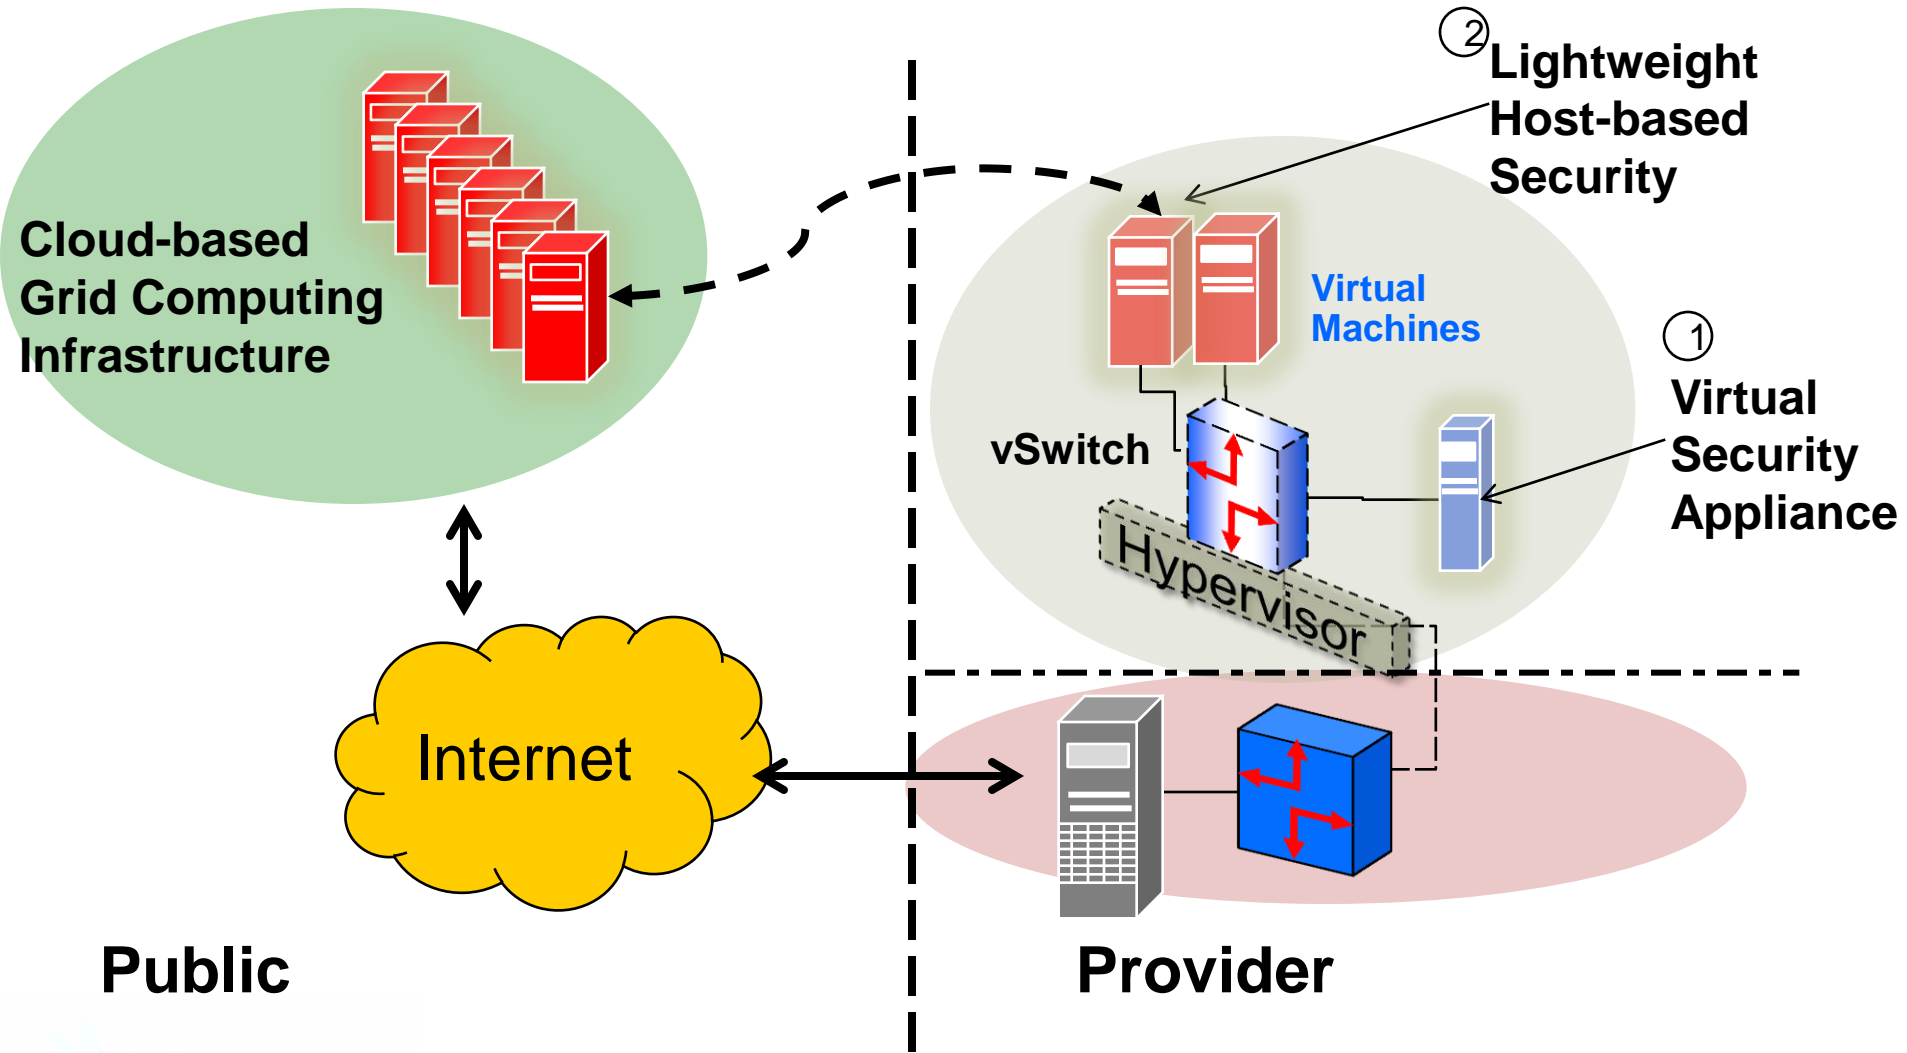

# Emerging Approaches to Cloud Security

## Data Centric Continued

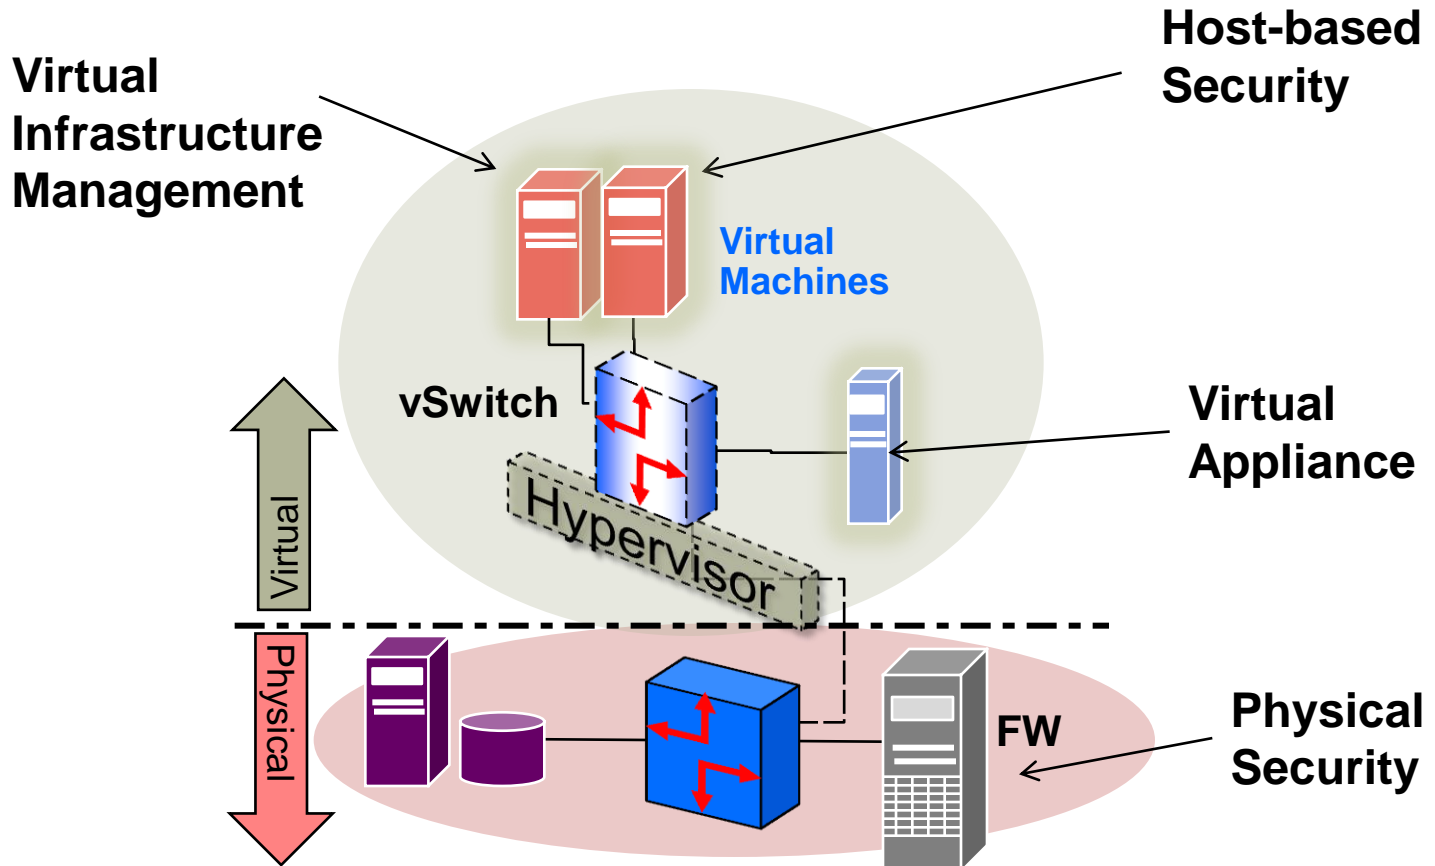

# Emerging Approaches to Cloud Security

## Infrastructure Centric

# Virtualization Security Contact Points

- **A risk-based approach is the only way to assess a cloud computing deployment decision**
  - **Most offerings are currently too risky for sensitive data**
- **Establish detective and preventive controls specific to each cloud deployment model:**
  - **SaaS - Browser patching, endpoint security, access reports**
  - **PaaS – Browser patching, hardening, endpoint security, access reports and vulnerability scanning**
  - **IaaS – VPN, configuration and patch management, host IDS/IPS, VirtSec appliance, access reports, vulnerability scanning, logging & event management**
- **Identity management is a key area of preventive control focus for all service models**
  - **This starts internally**

# Conclusion: What Should You Be Doing?

**Urgent: Act Now**

**Inventory all CSP relationships. Assess CSP against top 10 risks. Meet with auditors to assess compliance issues.**

**Short-Term Plans**

**Implement VirtSec and identity management in-house (or via third-party service) before moving to IaaS and PaaS.**

**Long-Term Plans**

**Push for open standards for APIs, platforms, user provisioning, authentication and authorization**

**Overall Focus**

**Keep focus on cloud goals of increasing flexibility and agility and providing a strong ROI.**

**Thank You**
