

## **Achievement in Transformational Infrastructure: Green Buildings**

### **Africa Building Partners Mother & Baby Unit, Ghana**

Africa Building Partners' Mother and Baby Unit project aims to reduce maternal and infant mortality rates in Ghana and the Gulf of Guinea, by establishing and equipping maternity, neonatal and paediatric ICUs. Sustainable building practices ensure lower operational costs, as well as freeing up personnel, medical equipment and maintenance resources.

### **Morocco Green Mosques Programme**

The Green Mosques programme seeks to aid Morocco's transition to a sustainable energy infrastructure. This involves installing renewable and energy-efficient technologies across the nation's 51,000 mosques and other public buildings, promoting public awareness of climate change through local religious leaders, and creating green jobs.

### **Capital House EcoHome Phuc Loi Project, Vietnam**

EcoHome is a venture of Capital House that provides affordable and environmentally sustainable homes. It is the first low-income housing project in Vietnam to meet international standards for green certification, and is projected to save over 500 GWh of electricity and 5 trillion litres of water over the life of the programme.
